

Neutron radiography is a non-destructive testing technique that allows imaging of otherwise undetectable defects in a variety of materials including electronic, mechanical, and military parts and assemblies. Using beams of penetrating radiation to interrogate an object, neutron radiography generates images that allow visualization of areas that attenuate the beam differently than neighbouring areas.

The unique capabilities of neutron radiography derive from its ability to image hydrogenous materials (water, oil, plastic, rubber, explosives) within components made of metals.

Nray Services Inc. has chosen to explore the beauty of nature in addition to the complexities of man's machines, and share the discoveries with you in the form of revealing, artistic images.

### 5 X 7 PRINTS

These prints are made from radiographs and are produced as "negative" prints on 5.5" x 8.5" paper. They are packaged individually with a white cardboard stiffener in a flat, heat-sealed polypropylene sleeve. Recommended retail price \$10.00 each. Wholesale pricing available for retailers.

### 8 X 10 PRINTS

These prints are made from radiographs and are produced as "negative" prints on 8.5" x 11" paper. They are packaged individually with a white cardboard stiffener in a flat, heat-sealed polypropylene sleeve. Recommended retail price \$20.00 each. Wholesale pricing available for retailers.

### GREETING CARDS

Greeting cards are "positive" prints, 4.25"x 5.5" packaged individually with an envelope, in a flat, heat-sealed polypropylene sleeve. Recommended retail price \$3.50 each. Wholesale pricing available for retailers.

Prints and cards are printed on Epson paper using Epson inks and an Epson printer.

### SHIPPING AND HANDLING

All prints and cards will be shipped using Canada Post lettermail or regular parcel service. Allow 2-3 weeks for delivery from time of order. Add \$5.00 for shipping and handling for orders under \$250. Orders over \$250 will be shipped at no charge.
